

Extend your machine's operational lifetime

Combining Midlife services with CARE agreements

A woman wearing a white hard hat with a headlamp, safety glasses, and a bright yellow high-visibility jacket with reflective stripes is working on a large industrial machine. She is wearing gloves and appears to be focused on her task. The machine has a complex structure with many small, rectangular components.

"I saw a great opportunity to double the life of the machine with Midlife services. And it also felt just right from a sustainability perspective."

Andreas Tydén
Production Manager
Skanska Sweden

Midlife services

Machine components can wear down over time, leading to a reduction in performance and an increased risk of unexpected failures. In some cases, a heavily used machine may require more than just replacing worn parts – its main components may have deteriorated to a point where the overall performance is compromised. At this stage, a major renovation is required to restore the machine back to optimal performance.

A midlife rebuild replaces critical components, restoring the machine to like-new condition, including technical upgrades. Backed by our extensive knowledge of machine wear and tear patterns, we know exactly what needs to be replaced to return a machine back to peak productivity.

The main benefit with Midlife services is that we are able to restore the performance of a machine to like new condition at a fraction of the cost of a replacement. We also offer service agreements comparable to those provided if the machine was newly manufactured, including an extended warranty.

By renovating instead of replacing, both cost and environmental impact are reduced – a smart and sustainable investment for the future.

As the manufacturer, we have extensive expertise and experience in restoring machines to perform at their best, returning them to factory condition, backed up by a CARE service agreement that extends a machines lifespan even further.

Service agreements

We offer the same service agreement as for a newly manufactured machine – ensuring an extended operational lifespan, combined with warranty coverage, and reliable, uninterrupted performance.

What's included?

Our service technicians perform preventive maintenance and optimize the machine for peak performance and reliability. If anything happens between service intervals, we take care of it.

Financial advantages

Budget security with predictable costs that keep productivity levels up and costs down for a better return on investment.

Enhanced productivity

With the help of our experienced service technicians, productivity is maximized while the risk of unexpected downtime is minimized. With a service agreement, your machine is in safe hands.

Ready to maximize your machine's lifespan?

We'll help you keep it running at peak performance for longer – contact us today.

Contact us

United in performance. Inspired by innovation.

Performance unites us, innovation inspires us, and commitment drives us to keep moving forward. Count on Epiroc to deliver the solutions you need to succeed today and the technology to lead tomorrow.
